

No other cable manufacturer worldwide pays similar attention to detail as SOLIDCOREAUDIO. No other cables reduce potential sources of sound degradation to such a high extent as SOLIDCOREAUDIO: no solder joints, no materials that carry static charges and eddie-current brakes (who else, please...?), no other conductor material than the best silver solidcore - of course custom-lacquered with C37 violin varnish and cryogenically treated. And by the way, the conductors are built-in in the right direction.

We are not aware of any interconnect cables that offer similar musicality at this given price - and we are not aware of any speaker cable, regardless of price, that can keep up with SOLIDCOREAUDIO silver foil cales.

Our search is over - thank you, Mr Kurz!
